Experience with human exposure

Product:

General Information : Human epidemiological studies show no increase in pulmonary disease in occupational populations with chronic exposures to boric acid dust and sodium borate dust. A recent epidemiology study under the conditions of normal occupational exposure to borate dusts indicated no effect on fertility.

Further information

Product:

Test Type: Reproductive/Developmental toxicity:
Remarks: No experimental test data. However, animal feeding studies with boric acid and sodium tetraborate in rat, mouse and dog, at high doses, have demonstrated effects on fertility and testes. The doses administered were many times in excess of those to which humans would normally be exposed

Test Type: Carcinogenicity/Mutagenicity:
Remarks: No experimental test data. However, no evidence of carcinogenicity or mutagenicity was observed with boric acid or other sodium borates.
